Functions

Auto

Setting of output relays according to the programmed parameters.

Permanently ON/OFF

With this function it is possible to fix any output relay in ON or OFF position independent to the set program parameters

Manual override

This function forces the output relay to switch into the position given for the next program step instantaneously (even before the interval given for the actual program step has expired). The relay remains in this position until the next invers control signal of the program occurs

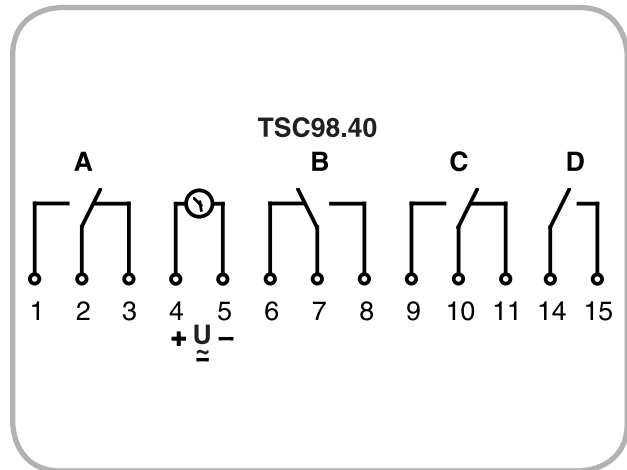

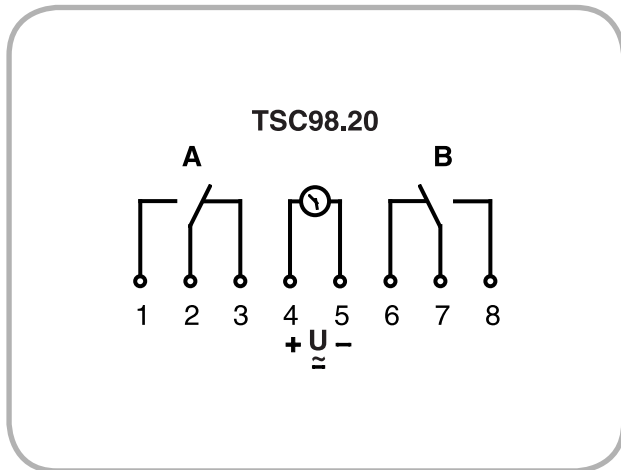

Impulse

If an impulse is set at a given time the output relay switches into on-position for the set time period.
